

## Vinegar

Vinegar is a natural, non-toxic product that safely deodorizes, disinfects and cleans most hard surfaces.

When your porcelain or tile floors become soiled, vinegar can effectively clean them without harsh fumes. White vinegar is a mild acid that works especially well to dissolve grease and hard water stains. Once the vinegar dries, it leaves behind a fresh, neutral scent. You can customize the scent by mixing a few drops of your favourite essential oils into the vinegar solution before cleaning.

Mix 1/4 to 1/2 cup white vinegar with 4 litres of warm water in a bucket.

For really tough stains, sprinkle the wet tile and grout with baking soda and scrub them with a cloth. Rinse with a mop dampened with the vinegar solution.

You will need:

- White vinegar
- Water
- Bucket
- Cloth or Cleaning brush

**NOTE: Warning - Don't mix vinegar with bleach.**
