Viron 10 Connect

10

Remote Control

Viron 10 Connect provides the option to control all pool equipment, valves, heaters and chlorinators from anywhere inside the home or by mobile device.

Viron 10 Connect through a Colour Touch Screen (as standard) allows for 8 items of equipment, plus heater and motorized valves. For this equipment, a data cable is required. Ethernet or Wireless Internet Gateways can be expanded optionally allowing mobile phone control.

Pool owners are always advised to have Ethernet provision to the plant room, as this will eliminate internet signal issues when installed wireless. Please note, one Colour Touch Screen only can be installed per Viron Connect.
